V、Matching with Multiple Engines for Use08

EF130 is a multi-functional square LCD instrument, from the KWP 2000 communication protocol to obtain voltage, water temperature, fuel consumption and other information, also can receive, speed, trim, switch alarm and other signals. Can select 1, 2, 3 and 4 engines simultaneously for matching.

Method Three, Install EF130 gauge from the bottom side of panel as below

- 1. Open one hole with 212.9mm length and 114.4mm width and holes according to below screw position. Make sure the holes dimension be the same as pictures.
- 2. Install the EF130 gauge from bottom to upside on the panel and adjust the position and lock the screws;
- 3. Connect the NMEA 2000 wires on the back of EF130 gauge and the other end should connect with NMEA 2000 network.

Troll Function Interface

- Steps:
- 1. Click the to be adjusted engine, confirm the to be adjusted engine is idle and the other engines are in the state of shutdown, otherwise will fail the adjustment.
 - 2. Press the "SET" button, when the "SET" is in the state of pressing down, it can be adjusted, and in the bounce state cannot be adjusted.
 - 3. Press the "-", " " "+" buttons to fine-tune the speed with an accuracy of 50 revolutions. At this point the harness troll + (white)/troll - (brown) outputs the ground signal (about 0.2s).

III、Spec and Parameters

Item	EF130
Size	7.0 inches
Resolution	1024*600 pixels
Working Volt.	9-32V DC
Working Current	400mA(12V)
Working Temp.	-20℃~+60℃
Stock Temp.	-20℃~+70℃

I、Installation

Method One , EF130 be fixed on the desk and angle can be adjusted:

Method Two, Install EF130 gauge from the upper side of panel as below:

- 1. Open one hole with 199.3mm length and 116.3mm width and holes according to below screw position. Make sure the holes dimension be the same as pictures.
- 2. Install the EF130 gauge from upside to bottom on the panel and adjust the position and lock the screws.
- 3. After installation and two trims can be removed.
- 4. Connect the NMEA 2000 wires on the back of EF130 gauge and the other end should connect with NMEA 2000 network.

01

II、Operation

Main Display Interface

Technical Description:

- 1、Speed signal: The engine outputs square wave signal (+12V), the default speed ratio is 2.
- 2、Trim: The stationary start resistance of 608 ohms is the lifted UP high position, running to the abort resistance of 75 ohms is the lifted DOWN low position.
- 3、C10 fault indication: ECU control, GND is active.
* When the signal is a frequency signal of 1.5s high level and 1.5s of grounding, the water accumulation signal alarm is activated.
* When the signal is a frequency signal of 1.0s high level and 0.5s grounding, the oil pressure alarm is activated.
- 4、C12 EFI fault: ECU controlled, GND is effective. Activates the EFI fault alarm when grounded for long periods of time.
- 5、K_BUS: Voltage display (8~16V), water temperature display (40~120 °C), fuel consumption display. Activates the voltage alarm when the voltage is lower than 8V or higher than 16V. Activates the water temperature alarm when the water temperature is greater than 98 °C for 1 minute.
- 6、Built-in GPS: speed display, orientation(compass) display, time display.
- 7、Hourly meter: subtotal hours (0~999.9H) can be manually cleared, when greater than 999.9 automatic zero re-timer, total hours (0~99999.9H) cannot be manually cleared, when greater than 99999.9 automatic zero re-timer. Power-down auto-save
- 8、Mileage: Subtotal mileage (0~999.9) can be manually cleared, when greater than 999.9 automatically zeroed and recounted, the total mileage (0~99999.9) cannot be manually cleared, when greater than 99999.9 automatic zero recount. Power-down auto-save.
- 9、The fuel level, fresh water, black water, depth and rudder are all from NMEA 2000 signal.
- 10、Press the physical button on the right side of the display to enter the menu setup interface.

IV、Menu Diagram Settings

Menu	Logs	Trip	Clock Offset (2)
			Trip Distance Reset
		Maintenance	Trip Hours Reset
	STD Hours Reset		
	Settings	Display	OBD Hours Reset
			Style : Digital/Scale
			Night : Off(White)/On(Black)
		Units	Backlight : 100~10%
			Initial
		Depth Enable (1)	
		AMP Enable (1)	
		Fuel Instance/Fresh Water Instance/ Black Water Instance (3)	
		Calibrate	Speed Ratio:0.1~24.0
			Trim Level
Alarm Value	Depth/Fuel/Fresh Water/ Sewage		
Alarms	EFI Trouble Codes		
	Power Off		
Language	中文/English		
Touch Screen	Touch : On/Off		
	Voice : On/Off		
* (1). Please turn off, when the sensor is not connected. (2). For calibration time. (3). Need to be consistent with the sensor serial number settings.

Alarming Icon Description

	Icon	Alarming Status	Normal status	Condition for Activation
1		Constantly bright	Not displayed	C12 GND, see technical specification
2		Flashing, a period of 3s (1.5s on, 1.5s off)		C10 GND, see technical specification
3		Flashing, a period of 1s (0.5s on, 0.5s off)		C10 GND, see technical specification
4		Reserved		Reserved
5		Reserved		Engine service time is reached
6		Flashing, a period of 1s (0.5s on, 0.5s off)	Constantly bright	Voltage less than 8V or greater than 16V
7				Water temp. greater than 98 °C lasts for 1 minute
8				The oil level is below the alarm value (default 20%) can be set manually
9				The water level below the alarm value (default 20%) can be set manually
10				The sewage level is above the alarm value (default 80%) can be set manually

05

V、Matching with Multiple Engines for Use

Please refer to the following connection when needs more than 1 engine:

when the gauge is not in use, please put on the matched cover to protect the gauge.
